Major contributions to Nursing

With nearly 36 years of experience in nursing research, education, and leadership, I have made substantial contributions to geriatric and psychiatric nursing. My career has been marked by over 200 high-quality publications, bridging knowledge and practices across borders. I have committed to advocating for the development of nursing as a profession growth, by delivering whether through delivering lectures, leading workshops, and mentoring future generations of nurses. A key achievement in my career was the establishment of China's first joint doctoral nursing program, addressing the critical shortage of qualified nursing faculty and helping elevate nursing education standards in China. In addition, I have been actively engaged in the Chinese Nursing Association and the WHO Collaborating Centre for Nursing Policy-Making and Leadership. Through these roles, I have been deeply involved in shaping nursing policy and advocating for leadership development at both national and international levels.
